Color the moon cards and place them according to their phases in the appropriate part of the calendar starting with Ramadan 1, Insha Allah.
Abu Huraira (Allah be pleased with him) narrated that the Messenger of Allah (may peace be upon him) made a mention of the new moon and (in this connection) said: Observe fast when you see it (the new moon) and break fast when you see it (the new moon of Shawwal), but when (the actual position of the month is) concealed from you (on account of cloudy sky), then count thirty days.
Narrated Hudhayfah:

The Prophet (peace be upon him) said: Do not fast (for Ramadan) before the coming of the month until you sight the moon or complete the number (of thirty days); then fast until you sight the moon or complete the number (of thirty days).
The Moon is about 250,000 miles from Earth.

Waning is when there is a decrease in the lit area of the moon.
The moon rises in the east and sets in the west.
The Moon takes about 27 days to go all the way around the Earth and return to its starting position.

The Moon travels around the Earth in a circle called an orbit.

The Moon is not a light source; it does not make its own light.

Waxing is when there is an increase in the lit area of the moon.

We can see the Moon because light from the Sun bounces off it back to the Earth.
A lunar month is about 29.5 days.

Countries near the equator see the crescent moon shaped like a smile.

The surface of the Moon has about the same area as the continent of Africa.

If you traveled to the moon by car it would take 130 days.

The new moon rises and sets at approximately the same time as the sun.

The Moon appears to change shape but what we are actually seeing is the Moon lit up by the light from the Sun in different ways on different days.
